SUMMARY

Data analyst with hands-on experience across a data analytics internship and multiple self-driven projects covering EDA, predictive modeling, and dashboard development. Skilled in Python (Pandas, NumPy), SQL, and Excel, with experience building Streamlit-based dashboards and machine learning models that turn raw datasets into actionable business recommendations. Currently building Power BI proficiency for enterprise-level reporting.

SKILLS

- Programming & Querying: Python, SQL, MySQL
- Data Analysis: Pandas, NumPy, Data Cleaning, Exploratory Data Analysis (EDA), Statistics, Feature Engineering
- Machine Learning: Scikit-learn, Random Forest, K-Means Clustering, Model Evaluation
- Visualization & Reporting: Streamlit, Excel (Pivot Tables, VLOOKUP, XLOOKUP, INDEX-MATCH), Power BI (in progress)
- Databases & Tools: SQLite, Jupyter Notebook, Git, GitHub, VS Code

EXPERIENCE

Data Analyst Intern — Unified Mentor Pvt. Ltd. | Jun 2026 – Sep 2026

- Completed a 3-month, project-based data analytics internship covering the full pipeline — data cleaning, exploratory analysis, predictive modeling, and dashboard delivery — across two real-world case studies (see Nassau Candy and Spotify Top 50 Spain under Projects).
- Delivered production-ready Streamlit dashboards, research papers, and executive summaries for each project to communicate findings and recommendations to stakeholders.

PROJECTS

Nassau Candy — Factory Reallocation & Shipping Optimization — Unified Mentor Data Analytics Fellowship

- Cleaned a 10,194-row factory shipping dataset (18 columns) down to 9,783 modeling-ready records, then built and benchmarked three regression models to predict shipment lead time.
- Selected Random Forest as the top performer, improving R^2 from 0.51 (baseline) to 0.59 and cutting MAE by 17%; segmented shipping routes into 4 clusters via K-Means, and built a scenario simulation engine covering 93% of products, all presented in a 5-page Streamlit dashboard.

Spotify Top 50 Spain — Song Lifecycle & Churn Analysis — Unified Mentor Data Analytics Fellowship

- Built a Python and Pandas pipeline processing 27,750 daily chart entries covering 575 unique tracks and 303 artists across 555 days of Spotify Top 50 Spain data, classifying each entry into 5 lifecycle stages (New Entry, Growth, Peak, Decline, Mature Phase).
- Computed 12 KPIs, including a 3.52% average daily churn rate, 48.3 average days on playlist, and a 17-day average time to peak popularity, and surfaced them through an interactive Streamlit dashboard.

E-commerce Sales Analysis (SQL Project) — Personal Project

- Analyzed an e-commerce dataset using SQL, writing joins, aggregations, and subqueries across sales, orders, and customer data to extract key business trends.
- Delivered actionable, query-backed insights to support business decision-making.

E-commerce Sales Dashboard (Excel Project) — Personal Project

- Built an interactive Excel dashboard using Pivot Tables, charts, and slicers, with KPI cards for key business metrics.
- Enabled dynamic filtering to track performance trends and support faster decision-making.

EDUCATION

Bachelor of Business Administration (BBA) — APIIT SD India (affiliated to Kurukshetra University) | 2023 – 2026

- CGPA: 7.64 / 10

CERTIFICATIONS

- Certificate of Internship — Data Analyst Intern, Unified Mentor Pvt. Ltd. (June 2026 – September 2026).
- Data Analytics Job Simulation — Deloitte, via Forage (April 2026): completed practical tasks in data analysis and forensic technology.
- 30 Days AI-Powered Excel Micro Course — SkillCourse (April 2026).
